

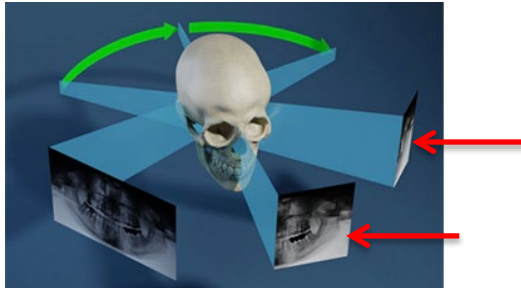

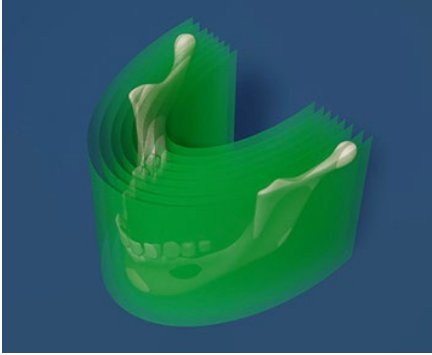

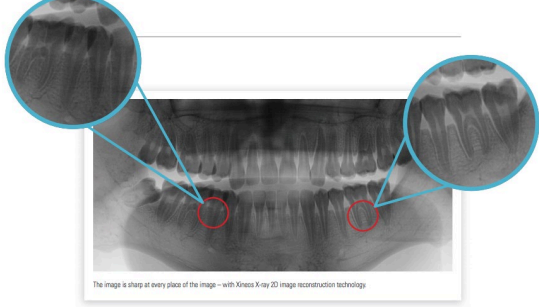

EXHIBIT 10

Teledyne Dalsa - Xineos X-Ray Image Reconstruction Technology Infringement of the '223 patent	
Claim 36	Evidence
(36.0) A method performed by a computing device having a processor and a memory, comprising:	<p>The Teledyne Dalsa Xineos X-Ray Image Reconstruction Technology performs a method performed by a computing device having a processor and a memory.</p> <p>For example, Xineos X-Ray Image Reconstruction Technology “is a revolutionary new method of capturing sharp panoramic images”</p> <p>https://www.teledynedalsa.com/en/learn/markets-and-applications/medical-life-sciences/x-ray-image-reconstruction-software/</p>
(36.1) converting by the processor at least a portion of a first image and at least a portion of a second image from a rectilinear-based view to a cylindrical-based view based at least in part on a conversion from rectilinear to cylindrical coordinates;	<p>The Teledyne Dalsa Xineos X-Ray Image Reconstruction Technology converts at least a portion of a first image and at least a portion of a second image from a rectilinear-based view to a cylindrical-based view based at least in part on a conversion from rectilinear to cylindrical coordinates.</p> <p>For example, “Using high speed frame-based CMOS detectors, we capture a 3D tomographic volume containing the entire clinically-relevant patient anatomy. This allows us to generate a stack of tomographic planes.”</p> 

	 <p data-bbox="824 590 1369 699">“From a tomographic stack, our advanced algorithms reconstruct an ideal 2D panoramic projection”</p>  <p data-bbox="824 1188 1385 1287"> https://www.teledynedalsa.com/en/learn/markets-and-applications/medical-life-sciences/x-ray-image-reconstruction-software/ </p>
<p data-bbox="237 1337 790 1520">(36.2) converting by the processor at least a portion of the cylindrical-based view to a rectilinear-based view based at least in part on a conversion from cylindrical to rectilinear coordinates; and</p>	<p data-bbox="824 1337 1357 1560">The Teledyne Dalsa Xineos X-Ray Image Reconstruction Technology converts at least a portion of the cylindrical-based view to a rectilinear-based view based at least in part on a conversion from cylindrical to rectilinear coordinates.</p> <p data-bbox="824 1608 1349 1831">For example, “The x-ray image optimization algorithms automatically combine the sharpest regions from each tomographic plane to produce a fully optimized and enhanced visualization of the patient’s anatomy.”</p>
